Abstract of the Disclosure

This invention creates a structure, relative to the user's core competencies, for professional researchers of available technology projects, to systematically identify, qualify and assess the feasibility and risk involved with the design, planning, implementation, operations and management of a project type that is modeled using the method, process and apparatus detailed in the description of the invention. No other method, process or apparatus models or creates core-competency relations of the values that are outputted from the invention.
